Medical Annotations:

Challenge: Brain tumor recognition by AI

For this medical project, we provided the client with two types of MRI Scans. 2000 MRI scans of the head section with a brain tumor, and 1500 MRI scans of the head section of a healthy brain without the brain tumor. All images were carefully annotated by certified radiologists who specialize in tumor diagnosis.

Keymakrs' input was used to train the medical AI computer vision model to recognize brain tumors with extremely high accuracy.
